LAPORAN PENYELENGGARAAN SERVER

ID Laporan: RPT-MBI-20251107-001 | Tarikh: 07 November 2025

MAKLUMAT PENYELENGGARAAN

Tarikh Pemeriksaan	07 November 2025	Lokasi	Remote Server - mbikedah.com.my
Masa Mula	2:30 PM	Masa Selesai	2:51 PM
Juruteknik	Muhammad Atiqi Hazizan	Tempoh (jam)	0 jam 21 minit

MAKLUMAT SERVER

Nama Server	mbikedah.com.my
Model	CloudLinux Server
Processor	AMD EPYC 7302P 16-Core Processor (16 cores, 32 threads)
Memory (RAM)	124GB RAM (37GB used, 81GB available)
Storage	434GB Root (372GB used, 40GB free) + 3.5TB Temp (2.9TB used, 432GB free)
Sistem Operasi	Linux 4.18.0-477.13.1.lve.1.el8.x86_64 (CloudLinux 8)
Fungsi Utama	Web hosting server untuk mbikedah.com.my - WordPress site

PEMERIKSAAN HARDWARE

Komponen	Nilai Diukur	Status	Catatan
CPU Status	Load Average: 11.59, 9.79, 9.44 (16 cores available)	WARNING	Load average agak tinggi (8-12), menunjukkan server sedang sibuk. CPU usage: 30.7% user, 8.5% system, 60% idle
Memory Status	124GB total, 38GB used, 79GB available, 6.8GB free	OK	Memory usage normal (31% used), masih banyak available. Swap: 760MB used dari 4GB
Disk Space - Root Partition	/dev/sda3: 372GB used / 434GB (91% used, 40GB free)	CRITICAL	Disk space hampir penuh! Hanya 40GB free. Perlu cleanup segera atau upgrade storage
Disk Space - Temp Partition	/dev/sdc1: 2.9TB used / 3.5TB (88% used, 432GB free)	WARNING	Temp partition 88% penuh, masih ada ruang tetapi perlu monitoring
Inode Usage	2,263,390 used / 28,909,568 (8% used)	OK	Inode usage sangat rendah, tiada masalah dengan jumlah file
System Uptime	817 days, 19 hours, 34 minutes	OK	Server sangat stabil, uptime excellent menunjukkan reliability tinggi

PEMERIKSAAN SOFTWARE

Komponen	Versi/Status	Status	Catatan
Operating System	CloudLinux 8 (Kernel 4.18.0-477.13.1.lve.1.el8.x86_64)	OK	OS version stabil, kernel dari Julai 2023. Perlu check untuk security updates
PHP Version	PHP 7.4.33 (CLI, NTS) - 55 extensions loaded	WARNING	PHP 7.4 sudah EOL (End of Life). Cadangan upgrade ke PHP 8.1 atau 8.2 untuk security
PHP Configuration	memory_limit: 512M, upload_max: 1G, post_max: 512M, max_execution: 0	OK	PHP settings mencukupi untuk WordPress operations
MySQL Version	MySQL 8.0.43 (Community Server)	OK	MySQL version terkini dan stabil
Web Server	Apache/HTTPD (cPanel managed)	OK	Web server dikendalikan oleh cPanel, status normal
Control Panel	cPanel detected	OK	cPanel active, semua services managed oleh control panel
WordPress Installation	WordPress detected (wp-config.php found)	OK	WordPress site aktif, 31 plugins detected, WP_DEBUG enabled (perlu disable untuk production)
Running Services	All services running, 0 failed services	OK	Tiada failed services, semua critical services berjalan normal

PERFORMANCE & CLEANUP

Aktiviti	Nilai Diukur	Status	Catatan
Website Files	public_html: 2.9GB (4,410 PHP files, 1,718 directories)	OK	Website size normal untuk WordPress site
WordPress Uploads	wp-content/uploads: 2.7GB	OK	Uploads folder mengambil majoriti space. Boleh consider cleanup old unused media
Mail Storage	Mail directory: 73GB (mbikedah.com.my mailbox)	WARNING	Mailbox sangat besar (73GB)! Perlu cleanup old emails atau archive
Log Files	Logs directory: 57MB	OK	Log files size manageable, boleh rotate jika perlu
Cache Files	LSCache: 14MB, tmp: 22MB	OK	Cache size kecil, tidak perlu cleanup
Backup Files	Multiple .htaccess backup files detected	OK	Backup files kecil, boleh keep untuk reference

STATUS BACKUP

Item	Nilai/Status	Kondisi	Catatan
Backup Schedule	cPanel managed backup	ACTIVE	Backup dikendalikan oleh cPanel, perlu verify schedule dan retention policy
Backup Location	cPanel backup system	SECURE	Backup location perlu disahkan melalui cPanel interface
Database Backup	Database: mbikedah_db2020	UNKNOWN	Perlu verify database backup status melalui cPanel atau MySQL dump schedule
Website Backup	public_html: 2.9GB	NORMAL	Website size manageable untuk backup operations

ANALISIS DISK CLEANUP

Ringkasan: Analisis mendalam untuk cleanup disk space tanpa affect WordPress atau email operations

Penggunaan Disk Space

Direktori	Saiz	Selamat Cleanup?	Impact WordPress	Impact Email	Potensi Savings
Mail	73GB (~20%)	YA	ZERO - Email dan WordPress adalah sistem berasingan	LOW - Jika backup dulu sebelum delete	50-60GB
public_html (WordPress)	2.9GB (~0.8%)	TIDAK	HIGH - Boleh affect website jika salah delete	ZERO	500MB-1GB (limited)
subdomains	671MB (~0.2%)	TIDAK	MEDIUM - Boleh affect subdomains	ZERO	Varies
logs	57MB (~0.02%)	YA	ZERO	ZERO	50-100MB
cache/tmp	36MB (~0.01%)	YA	ZERO - Cache akan regenerate	ZERO	100-500MB

Priority Cleanup

Priority	Target	Expected Savings	Risk Level	Impact
Priority 1	Email Cleanup (73GB)	50-60GB	LOW	ZERO impact pada WordPress, email boleh di-restore dari backup jika perlu
Priority 2	WordPress Cache & Logs	100-500MB	LOW	ZERO - Cache akan regenerate automatically, logs tidak affect functionality
Priority 3	WordPress Media Optimization (OPTIONAL)	500MB-1GB	MEDIUM	POSSIBLE - Boleh affect website jika delete wrong files

Items Selamat untuk Cleanup

Item	Lokasi	Cadangan
Email Archive	/home2/mbikedah/mail/	Archive emails >6 bulan atau 1 tahun ke local backup, kemudian delete dari server
WordPress Cache	/home2/mbikedah/public_html/wp-content/cache/	Clear via plugin - akan regenerate automatically
Log Files	/home2/mbikedah/logs/	Rotate atau compress old logs - tidak affect functionality
Temp Files	/home2/mbikedah/tmp/	Clear temporary files - akan regenerate jika perlu
cPanel Cache	/home2/mbikedah/.cpanel/datastore	Safe untuk clear - cPanel akan regenerate

Target Goal:
Current Free Space: 40GB
Target Free Space: 87GB (20% of 434GB)
Required Cleanup: 47GB minimum
Recommended Approach: Focus pada Email cleanup (Priority 1) untuk achieve target dengan selamat

Kesimpulan:
Email directory (73GB) adalah penyumbang terbesar dan paling selamat untuk cleanup. WordPress cleanup tidak recommended sebagai primary solution kerana size kecil (2.9GB) dan high risk jika salah delete. Best approach: Archive dan delete old emails untuk free 50-60GB tanpa affect WordPress operations.
